

Pollet Family of Products

LinPolGreen

For use in autoscrubbers. LinPol is an organic, 100% biodegradable natural liquid soap used for cleaning and protecting all types of floor surfaces.

Case Size: 4/5 liters, 9/2 liters POD, POD 5-Pack, 1/55 gallons

Enzysan 2000

A biological cleaner and odor eliminator used to clean restrooms, drains, carpets, trash containers and any area plagued with unpleasant odors.

Case Size: 6/2 liters, 4/5 liters, 4/2 liters POD, 9/2 liters POD, 1/55 gallons

Delta Ultra

A general purpose cleaner and degreaser used to clean floors, spray & wipe of greasy food areas, and scrub and recoat prep.

Case Size: 6/2 liters, 4/5 liters, 9/2 liters POD, 1/55 gallons

Delta Mild 2000

A neutral floor cleaner that won't damage floor coatings even with daily use. Its surface-active capacity provides for excellent cleaning action.

Case Size: 6/2 liters, 4/5 liters, 4/2 liters POD, 9/2 liters POD, POD 5-Pack, 1/55 gallons

All products available through dilution control. LinPol must be used through an autoscrubber.

Technical Support and Training You Need.

The LinPol floor care system is not only unique by virtue of its product chemistry, but also by way of the training and continued support that are offered as part of a successful program. Initial start-up includes on-site testing, autoscrubber mechanical inspection, installation of a dilution control system, and hands-on worker training in-

cluding product review, procedures and safety. Ongoing training is handled through scheduled follow-up visits. Follow-up visits include additional worker training as needed, autoscrubber inspection and inspection of the LinPol floors overall. Quality ongoing service and training ensure a successful floor care program.

The LinPol Story.

The LinPol floor care system was developed in Belgium for the grocery industry as a single step daily procedure to maintain beautiful floors with limited access. Pollet, one of the oldest soap companies in Europe, has established itself as a leading worldwide provider of organic floor care systems. Today, the LinPol floor care system is currently used in thousands of facilities throughout Europe. In the United States, these products and training programs are only available through select distribution.

LinPol^{Green} Organic Floor Cleaner | Protectant

Simple Is Beautiful.

The LinPol floor technique requires the use of a quality autoscrubber, appropriate floor pad, and the LinPol organic floor treatment. The simplicity of a single daily step allows for consistent results with no peaks and valleys. For finished floors (VCT, wood), stripping and recoating procedures are greatly minimized. The need for burnishing is significantly reduced or eliminated due to the protective qualities of LinPol. For unfinished floors (concrete, ceramic, marble, terrazzo), the single cleaning step with LinPol provides clean protection without the need of specialty coatings. LinPol is the only product needed to maintain beautiful and safe floors. For floors that have reached a saturation point, or are extremely low in porosity, we suggest alternating with either Delta Mild for VCT or Delta Ultra for harder floor surfaces.

For use with
Autoscrubbers

Less Products. Less Labor.

The LinPol system allows you to invest in a high quality program that uses fewer products in less time. You will use less floor finish, pads, strippers, and maintainers. Recoating, stripping and burnishing procedures are reduced by up to 50%.

The following example shows an overall cost savings of 35%: 17% materials savings and an additional 18% savings in labor. This scenario is for 30,000 sq. ft. of VCT with 4 coats of quality floor finish. The conventional way typically requires a minimum of 2 additional recoats during the year and frequent burnishings, while the LinPol system reduces the need for burnishings and recoatings over that same time period.

How It Works.

The natural protection of liquid vegetable soap, as well as its hyper cleaning action not only allow for a cleaner result, but also a satiny protection which forms a protective barrier easing cleaning and providing longevity to the floor's quality.

The result is floors that are cleaner, brighter, and produce less dust and higher slip resistance. The process is simple, ergonomic, and absolutely safe for the operator, occupants, and the environment.

LinPol Floor Care Program

Lifts out dirt and leaves behind a protective coating that builds.

Customers Love It.

"... I continue to discover wonderful budget savings with the use of LinPol. ... I've been able to purchase much needed equipment with the money I saved on floor finish, burnishing pads, and man-hours ..."

*Sandra Moulton, Custodial Supervisor
Governor Wentworth Regional School District*

"Last year we integrated LinPol into our daily floor program. ... The results have been tremendous and we have reduced the amount of floor stripping in hallways, cafeterias, and gymnasiums to none. Our slipping hazards have gone from 2 to 3 a year to none. Our staff has continued our burnishing program, but was able to reduce our daily routine to once a week in order to keep our high gloss shine. The results have allowed me to schedule more time for carpet care, which promotes better air quality for students and staff."

*Jon Stonier
Director of Plant Operations M.S.A.D. #11, Gardiner, ME*
